Objective

Dedicated, creative and well-detailed frontend developer with a passion for building responsive and user-focused digital experiences. Seeking a role where I can leverage my skills in JavaScript, Typescript, React, and development to deliver, craft intuitive and solve user client-side problem with modern, impactful, and high-performance software.

Experience

- Geegstack — Frontend Developer (2023 – 2025)
- Built mobile-first, responsive websites using HTML, CSS, JavaScript, and Typescript ensuring seamless user experiences across devices.
- Developed interactive user interfaces using Typescript and React.js with a focus on easy accessibility and performance.
- Integrated RESTful APIs and FastAPI to manage complex state and asynchronous data flows.
- Used Git and GitHub for version control, issue tracking, and code collaboration and sharing.
- Collaborated with designers, backend developers, and product managers to create polished, user-centered applications.

Projects

Project Name – KulHalal

A responsive web application designed to help Muslims verify whether food products and ingredients are **Halal and permissible for consumption**. The platform provides users with an accessible way to check food information and make informed dietary decisions. Major features include **Halal status checking, ingredient verification, product information, and responsive design** for mobile and desktop users.
